Sinchana MS

Software Engineer | *React · TypeScript · Next.js · Product Engineering*
Bengaluru, India | sinchana.ms97@gmail.com | linkedin.com/in/sinchana-ms

SKILLS

Frontend: React, TypeScript, Next.js, Redux, Zustand, React Query, AG Grid, Storybook
Backend & Data: Node.js, Express.js, REST APIs, PostgreSQL, SQL, Athena, Metabase
Cloud & Real-time: AWS (S3, CloudFront, AppConfig), WebSocket, SSE, Sentry
Architecture: RBAC, Multi-tenant Systems, Frontend Architecture, SEO, Performance Optimization

EXPERIENCE

Software Engineer · Founding Engineer | Arrowhead AI Mar 2025 – Present

- Spearheaded development of a voice AI call-flow platform (React, TypeScript, Zustand, React Query) with a visual Flow DSL editor, version control, and production workflows — supporting 60-80 campaigns processing 30K calls/day.
- Designed frontend architecture for a multi-region product (India + Global), handling region-aware auth, API routing, token refresh concurrency, and data consistency.
- Built and owned a customer-facing dashboard with call auditing, audio playback, journey tracking, and embedded Metabase/QuickSight analytics — serving 20+ campaigns via Athena.
- Implemented RBAC with 5 roles and resource-level permissions across platforms, enabling self-service access management for 500+ users — eliminating dev team dependency.
- Built config-driven, multi-tenant systems: 3 form deployments (JSON schemas, S3, CloudFront) for per-client live-call data capture, and billing workflows with domain defaults and campaign overrides — enabling ops self-service.
- Built real-time product capabilities using WebSockets, SSE, and WebRTC (Daily.co) for flow testing, live call streaming, and in-browser voice testing.
- Built the company website (Next.js 15) with live AI demo; ensured performance and SEO optimization, achieving a Lighthouse score of ~90.
- Mentored junior engineers; collaborated closely with product, design, backend, and AI teams on frontend architecture, reusable components, API design, and implementation of scalable product features.

Software Development Engineer | Zeda.io Aug 2022 – Dec 2024

- Built and maintained product experiences using React, TypeScript, and Redux for an AI-powered product discovery platform.
- Owned authentication and onboarding workflows, designing resilient user journeys with complex edge-case handling.
- Improved application performance — reduced load times by 20% and unnecessary re-renders by 30%.
- Built integrations with Google Workspace, Slack, Jira, Intercom, HubSpot, Salesforce, and Gong.
- Developed reusable design-system components using React, TypeScript, and Storybook, establishing consistent UI patterns across the product.

System Engineer | Infosys Jul 2018 – May 2022

- Automated service account management workflows reducing manual effort by 80%, and built monitoring dashboards using Splunk and Power BI for operational visibility.

EDUCATION

B.Sc. (Physics, Chemistry, Mathematics) — Bangalore University (2015–2018)
